## What Is The Densest Element?

A reader asked David Ropeik, "What is the densest element?"

Read his response and think about what it means in relation to what you have been learning about density.

1. List all the causes of density you can find in the answer he gave the reader.

2. List all the things in his answer that agree with what you have been learning about the causes of density at a microscopic or zoomed-in level and explain each one. (There should be at least 3 things)

List all the things that don't make sense in his response and explain why they don't make sense.
